Commentary

Headline CPI

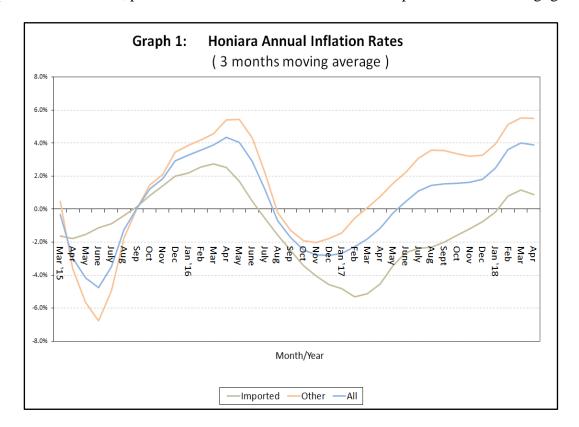

The Honiara Consumer Price Index (CPI) for the month of April 2018 fell slightly by 0.03% from 194.7 the previous month to 194.6. This was mainly driven by price drops in Drinks and Tobacco, and Household Operation categories of the index, which outweighed price increases in Food, and Housing and Utilities sub-indexes.

The Food index went up during the month by 0.9% to 181.9. This was mainly driven by price rises in sugar (3.1%), and fresh fruits and vegetables sold at the Honiara market; most notable were bush cabbage (25.8%), pawpaw (22.0%), tomatoes (20.7%), fern cabbage (17.0%), cooking banana (3.1%), green coconut (1.9%), spring onion (8.2%) and green pepper (8.6%). These outweighed price drops in dry coconuts (-23.5%), melon (-14.2%), chinese cabbage (-8.4%), cucumber (-7.2%), kumara heaps (-6.9%), cassava (-1.6%), green bean (-0.7%), bush lime (-8.3%) and non-alcoholic beverages (-0.3%) to result in the slight rise of the overall food index.

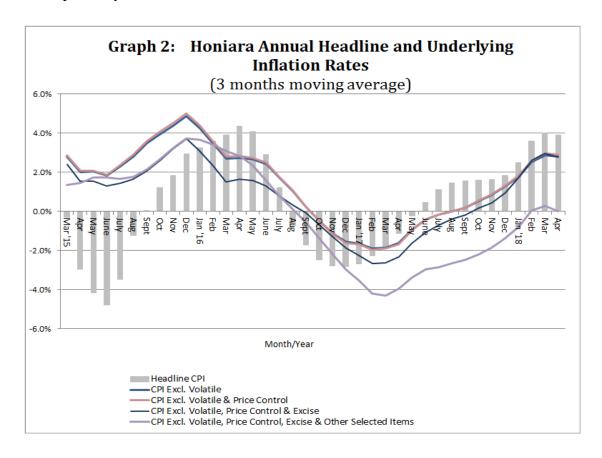

Major changes in other sub-index categories were as follows:

- Drinks and Tobacco fell 6.7% driven by a 1.6% and 20.3% price drop in tobacco and betel nut, respectively.
- Clothing and Footwear fell 0.2% on account of a 3.1% drop in footwear prices.
- Housing and Utilities went up 0.8% largely driven by a 3.5% increase in electricity charges.
- Household Operations dropped 0.2% driven by price falls in household cleaning products, notably soap.
- Miscellaneous Items fell 1.4% resulting from drops in the prices of toiletries.

Apart from the above, price movements elsewhere in the consumption basket were negligible.

The overall annual headline inflation rate for the month of April 2018 calculated on a 3 months moving average basis was 3.9%, down marginally by 0.1 percentage points from 4.0% the previous month. The corresponding inflation rates for imported and other items were 0.9% and 5.5%, respectively.

Underlying Inflation

The main underlying rates of inflation based on a 3 months moving average for the month of April 2018 were observed between 0.0% and 2.9% while the headline inflation rate was at 3.9%.

About the Bulletin

Concepts and Definitions

Consumer Price Index (CPI): The Consumer Price Index (CPI) is a measure of the average change in the price levels of a basket of consumer goods and services at a specified time relative to a base year purchased by households. The current CPI is referred to as the Honiara CPI (HCPI) given its limited coverage of Honiara urban, as a proxy for the country.

Inflation:

The percentage change in the CPI from one period relative to another is referred to as a measure of inflation. The CPI is often referred to as the headline CPI generating the official headline inflation. In the Solomon Islands, inflation is limited to the current CPI basket of goods and services and thus does not represent all price movements of all goods and services in the economy. It is generally a broad measure of the cost of living in the country.

Underlying Inflation: The underlying inflation (or the underlying rate of inflation) measure attempts to isolate the effects of the price shocks in inflation while retaining persistent movements. Such a measure is more useful than the headline inflation for purposes of analysis such as in developing and monitoring monetary and fiscal policies. This measure is often referred to as core inflation depending on the choice of the type of underlying rate measure. Four underlying rate measures have been produced based on the exclusion approach and mentioned below. More details can be sourced from previous publications (annex 1):

- I. All CPI excluding Volatile Items. The volatile items include: Fruit and Vegetables + Fresh seafood + Betel nut + Motor vehicle fuel (petrol & diesel) + Fuel for household utilities (kerosene)
- II. All CPI excluding Volatile Items and Price Control Items: The price control items include: First Grade Taiyo can fish + Bus fares + Taxi fares
- III. All CPI excluding Volatile, Price Control and Excise Items: The excise items include Alcohol + Tobacco
- IV. All CPI excluding Volatile, Price Control, Excise Items and Other Selected Items: The other selected items include: house rent (public service), telephone charges, electricity and water, 3rd party insurance, transport fares and education.

Spliced Series: A 'spliced series' is where a new series is linked to the previous series while maintaining the previous series reference period. In Table 4, the previous reference period of 4^{th} quarter 1992 is maintained and statistically expressed as 4^{th} quarter 1992 = 100.

Symbols used

r : revised, p : preliminary, e : estimated, na : not available, -- : no items in this category, — : nil or rounded to zero

Data Quality Statement: Consumer Price Index

Data Source:	Price survey (collections) of selected retail outlets and markets by the National Statistics Office (NSO)
Institutional Environment:	Data Collector(s): The NSO collects the data from various retail outlets, the main Honiara Central Market, other betel nut area markets, and certain service providers.
	Collection authority: The data is collected under the Statistics Act 1970 (and 2007 Amendments), and the Census Act 1959.
	Data Compiler(s): The NSO compiles the data.
	Additional information: Statistical confidentiality is guaranteed under the Statistics Act 1970 (and 2007 Amendments).
Relevance:	Data coverage: The NSO collects mainly price data on a wide range of consumer goods and services based on a 'basket' of 187 items reflecting the spending behavior of households in Honiara urban area. The basket of items are classified according to eight main expenditure categories or groups: Food, Drinks and Tobacco, Clothing and Footwear, Housing and Utilities, Household Operations, Transport and Communication, Recreation, Health and Other Services, and Miscellaneous.
	Level of geography: The scope of the current CPI is limited to Honiara only. Plans are underway to extend the coverage to include other key provincial centers of Auki, Noro and Gizo.
	Key Data Items: Key indicators include: headline inflation and underlying inflation by main expenditure categories, headline CPI by imported and domestic group, comparative prices, and the spliced index series. These indicators are presented periodically (i.e, month on month and 3-months moving average) and released on monthly frequency. The annual (year on year) series is made available on request.
	The underlying or core inflation measures include: I. All CPI excluding Volatile Items; II. All CPI excluding Volatile Items and Price Control Items; III. All CPI excluding Volatile, Price Control and Excise Items; and IV. All CPI excluding Volatile, Price Control, Excise Items and Other Selected Items. Technical notes can be sourced from previous publications (annex 1).
	Compilation methodology: The NSO applies the internationally recognized Laspeyers method based on the weighted Laspeyres' index for computing the CPI. The exclusion based method is applied in deriving the underlying inflation rate measures.
	Standard classifications : The NSO adopts the UN Classification Of Individual Consumption according to Purpose (COICOP) to classify data within the Solomon Islands context. The NSO is currently harmonizing its classification in line with the pacific regional COICOP for regional comparability purposes.

Numerator/Denominator Source: The numerators and denominators for percentages are from the same data source. **Additional information:** The CPI and inflation are key economic indicators that are able to inform the country's key monetary and fiscal (budgetary) policies, and inform the general public about the general cost of living in Honiara or the country. Apart from the availability of other official price measures, other uses of the CPI include informing decision making and assessments about inflation adjusted wage indexation policies. The CPI is also used as a deflator of other economic data. For example, the CPI and its components are used to adjust the Gross Domestic Product (GDP) in current prices for price changes and to convert these series into inflation adjusted series or real GDP. Data collected: The NSO collects the prices of fresh fruit, vegetables and meat weekly Timeliness: and collects the prices of all other items during any one day in the second half of the month. **Data available:** The data is usually available 2 weeks after the reference month. **Referenced Period:** The data is published for a particular calendar month. The data is published on a monthly, quarterly (3-months moving average) and annual frequencies. Additional information: There are sometimes revisions to data after release where data for missing prices becomes available or if adjustments need to be made to accommodate changes following recognized statistical techniques. Method of Collection: The NSO collects data mainly by direct approach (visits) in the Accuracy: collections of prices in retail outlets and markets, and by face-to-face approach from selected service providers. **Data Adjustments:** Data are sometimes adjusted to accommodate changes in product specifications and branding following recognized statistical techniques Additional information: The NSO uses a quality assurance process to minimise data quality issues, item specifications issues and processing errors. Consistency over time: The data is consistent over time since 1992. The series was linked Coherence: (spliced) in 2005 to maintain consistency in series back to the 1992 base year. Due to the loss of past data records as a consequence of the ethnic tensions from 1998 to 2003, the NSO has not officially published a linked series prior to 1992. However, users who possess older records of the data are able to link back the series to meet their own interests. Progressive improvements in definitions and methods have been applied since the first iteration of the index. Prior to independence in 1978 and up to mid-1990s (with the conduct of the 1982 and 1990/91 sample household income and expenditure surveys (limited coverage)), the Retail Price Index (RPI) was the first index used as a measure of the changes in the prices of goods and services in Honiara. The weighting scheme and the basket of goods and services captured in the 1982 HIES reflected predominantly residents and expatriate household expenditures in urban Honiara.

In the 1990/91 HIES, the statistical focus shifted towards Solomon Islands citizen and resident households whose expenditure shares then formed the basis of the weight, and selection of the basket of goods and services. With the updated weighting scheme and basket, and following the weighted Laspeyres' index procedure, the subsequent index was referred to as the Honiara CPI (HCPI) in 2000 (covering the September-December 1999 period). In 2005/6, another more comprehensive HIES covering Solomon Islands citizen/resident households was undertaken to update of the CPI weights based on the 1990/91 survey. The construction of the CPI (2005=100) followed similar methods noting improvements in weights and the basket of goods and services. In 2012/13, the NSO completed the conduct of the 2012/13 HIES. The results for the updated CPI are currently being finalized and planned for release in the third quarter of 2018. This release will include an update on the weighting scheme, concepts and methodology applied ensuring consistency in the time series data.

It should be noted that a number of users currently refer to the current CPI as the RPI and/or use the term interchangeably.

The relative weights of the basket of goods and services are now planned for updating approximately every 10 years from data from the household income and expenditure survey (HIES).

Additional information: There are no actual price data for some months of the year 2000 during the period of 'The Tensions'. During the civil unrest period in 1998 to 2003, the NSO also lost a number of data files and records during this period.

Interpretability:

The movement in index from one period relative to another can be expressed as a percentage change or change in index points. In the Solomon Islands context, this percentage change is referred very broadly as headline inflation. The following simple example shows the change in index points and percentage change:

If we look at the recent CPI (All Items) for April 2018 = 194.59 and April 2017 (All Items) CPI=188.55 periods, the index point is the difference between the two index levels, i.e, 6.04 (194.59-188.55). This implies that the CPI increased by 6.04 points since April 2017. However, it is useful to express this movement as a percentage change. Thus, we can calculate the percentage change by subtracting the index value of the previous period (April 2017) from the current period (April 2018) and dividing the resulting value by the index value of the previous period (April 2017) and then multiplying by 100.

Thus, $[(194.59 - 188.55)/188.55] \times 100 = (6.04/188.55) \times 100 = 0.032034 \times 100 = 3.2\%$ (rounded to one decimal point). This implies that prices have increased by 3.2% since April 2017 or from the period April 2017 to April 2018. So while the CPI has increased by 6.04 index points, prices have increased by 3.2 percent.

Similar interpretations can be applied to various periods of comparisons of interest. The NSO officially reports the headline CPI and headline inflation based on the 3-months moving average period, on the same period in the preceding year. However, data by month and annual are provided for users to support their choice of a particular period for CPI and inflation.

Accessibility:	Users can request unpublished data for issues of statistical bulletins that have already been released by contacting the Prices Unit. There are no costs associated with the provision of this data.
	Contact details:
	Email: <u>STATS-Economics@mof.gov.sb</u>
	Telephone: (+677) 27835 or (+677) 25451
	Additional information: The data will be made available in a spreadsheet format from the SINSO website (www.statistics.gov.sb) and in a hard copy.
