#### **COMMENTARY**

#### HEADLINE CPI

The National Consumer Price Index (CPI) dropped 2.4 percent to 106.6 in June 2021. Through the year, compared to the same month in 2020, the National CPI dropped 0.6 percent.

The most significant changes by major expenditure groups from the previous month include:

- Food and Non-Alcoholic Beverages: (+0.2%),
- Alcoholic beverages, tobacco and narcotics: (-14.1%),
- Housing, water, electricity, gas and other fuels: (-0.5%),
- Furnishings, household equipment and routine household maintenance: (-0.1%),
- Health: (+0.4%),
- Transport: (+0.3%),
- Recreation & Culture: (+1.7%),
- Miscellaneous (+0.2%).

The Solomon Islands inflation rate for the month of June 2021 calculated on a 3-months moving average basis was -1.5%. The corresponding inflation rates for imported items was -2.2%, while other (domestic) items inflation rate was -1.1%.

#### **UNDERLYING INFLATION**

The Solomon Islands underlying rates of inflation based on a 3-months moving average was observed between -1.7% and -0.8% for June 2021.

The headline inflation rates for the respective provincial towns calculated on a 3-months moving average basis were: Honiara: (-1.1%); Auki: (-0.4%); Gizo: (+2.7%); and Noro: (-6.5%).

The main percentage changes in index by CPI town and expenditure group from the previous month include:

#### **Honiara:** (-2.8%)

The most significant changes in movements include:

- Food and Non-Alcoholic Beverages: (0.2%)
- Alcoholic beverages, tobacco and narcotics: (-15.3%)
- Clothing & Footwear: (-0.2%)
- Housing, water, electricity, gas and other fuels: (-0.5%)
- Health: (+0.4%)
- Transport: (+0.4%)
- Recreation & Culture: (+1.9%)
- Miscellaneous goods & services: (+1.3%)

#### Auki: (+0.3%)

The main contributors to the movements were:

- Food & Non-alcoholic Beverages: (+2.4%)
- Alcoholic beverages, tobacco and narcotics: (-3.9%)
- Clothing: (-0.4%)
- Housing, water, electricity, gas and other fuels: (-0.7%)
- Furnishings, household equipment and routine household maintenance: (+0.1%)

#### Gizo: (-1.5%)

The main drivers to this movements were:

- Food and Non-Alcoholic Beverages: (-3.3%)
- Alcoholic beverages, tobacco & narcotics: (+4.4%)
- Clothing & Footwear: (-0.2 %)
- Housing, water, electricity, gas and other fuels: (-0.7%)
- Furnishings, household equipment and routine household maintenance: (-0.3%)
- Transport: (-1.6%)
- Restaurants & hotels: (-5.6%)
- Miscellaneous goods & services: (-0.3%)

## Noro: (+0.2%)

The main contributors to the movements were:

- Food and Non-alcoholic Beverages: (+0.1%)
- Clothing & Footwear: (+3.9%)
- Housing, water, electricity, gas and other fuels: (-0.5%)
- Furnishings, household equipment and routine household maintenance: (+0.8%)
- Transport: (-0.8%)
- Miscellaneous goods & services: (-0.5%)

## **About the Bulletin**

#### **Concepts and Definitions**

Consumer Price Index (CPI): The Consumer Price Index (CPI) is a measure of the average change in the price levels of a basket of consumer goods and services purchased by households at a specified time relative to a base year. The current CPI is referred to as the Solomon Islands CPI given its coverage of Honiara urban, Auki urban, Gizo urban and Noro urban as a proxy for the country.

**The Solomon Islands CPI** is the weighted average of the four urban localities priced. These collected representative prices are aggregated using the data from the 2012/13 Household Income and Expenditure Survey (HIES). Further details are discussed in the Data Quality Statement below and in the Technical Note: 1/2018 CPI – Series 3 Reweight released in September 2018.

**Inflation:** The percentage change in the CPI from one period relative to another is referred to as a measure of inflation. The CPI is often referred to as the headline CPI generating the official headline inflation. In Solomon Islands, inflation is limited to the current CPI basket of goods and services and thus does not represent all price movements of all goods and services in the economy. It is generally a broad measure of the cost of living in the country.

**Underlying Inflation:** The underlying inflation (or the underlying rate of inflation) measure attempts to isolate the effects of the price shocks in inflation while retaining persistent movements. Such a measure is more useful than the headline inflation for purposes of analysis such as in developing and monitoring monetary and fiscal policies. This measure is often referred to as core inflation depending on the choice of the type of underlying rate measure. Four underlying rate measures have been produced based on the exclusion approach and mentioned below. More details can be sourced from any copy of a 2017 CPI publication (annex 1):

- I. All CPI excluding Volatile Items. The volatile items include: Fruit and Vegetables + Fresh seafood + Betel nut + Motor vehicle fuel (petrol & diesel) + Fuel for household utilities (kerosene)
- II. All CPI excluding Volatile Items and Price Control Items: The price control items include: First Grade Taiyo can fish + Bus fares + Taxi fares
- III. All CPI excluding Volatile, Price Control and Excise Items: The excise items include Alcohol + Tobacco
- IV. All CPI excluding Volatile, Price Control, Excise Items and Other Selected Items: The other selected items include: house rent (public service), telephone charges, electricity and water, 3<sup>rd</sup> party insurance, transport fares and education.

#### Symbols used

r: revised, p: preliminary, e: estimated, na: not available, --: no items in this category, —: nil or rounded to zero Small discrepancies between totals and sums are due to rounding.

#### **Upcoming Releases**

July CPI Week beginning September 13th, 2021

August CPI Week beginning September 27th, 2021

September CPI Week beginning October 25th, 2021

# **Data Quality Statement: Consumer Price Index**

Data Source:	Price survey (collections) of selected retail outlets and markets by the National Statistics Office (SINSO)
Institutional Environment:	<b>Data Collector(s):</b> The SINSO collects the data from various retail outlets, the main Honiara Central Market, other betel nut area markets, and certain service providers.
	<b>Collection authority:</b> The data is collected under the Statistics Act 1970 (and 2007 Amendments), and the Census Act 1959.
	Data Compiler(s): The SINSO compiles the data.
	<b>Additional information:</b> Statistical confidentiality is guaranteed under the Statistics Act 1970 (and 2007 Amendments).
Relevance:	Data coverage: The SINSO collects price data on a wide range of consumer goods and services that constitutes an updated Solomon Islands 'basket' of 205 items based on the 2012/13 Household Income and Expenditure Survey (HIES). This basket reflects broadly the spending behavior of households in urban areas of Honiara (Guadalcanal Province), Auki (Malaita), Gizo (Western Province) and Noro (Western Province). The basket of items by national and urban locality are classified according to 12 main expenditure categories or groups: 1. Food & non-alcoholic beverages, 2. Alcoholic beverages, tobacco & narcotics, 3. Clothing & footwear, 4. Housing, water electricity, gas & other fuels, 5. Furnishings, household equipment & routine household maintenance, 6. Health, 7. Transport, 8. Communication, 9. Recreation & culture e, 10. Education, 11. Restaurants & hotels, 12. Miscellaneous goods & services. The respective basket of items for the four urban areas include Honiara (205 items), Auki (169 items), Gizo (176 items) and Noro (168 items).
	The goods and services that are included in the basket and their relative importance represented by the weights allocated from expenditure information from the HIES 2012/13 are shown in the table below:

below:

SERIES THREE CPI WEIGHTS - 2012-1  Division	Solomon Islands	Auki	Gizo	Noro	Honiara	Honiara weight to SI	Auki, Gizo & Noro weight to SI

Honiara has the biggest weight (88.1%) relative to the national average/all other urban areas and thus price movements in the Honiara CPI/basket has a relatively bigger effect on the national average and the CPIs of most of the other small towns, although the extent of price movements can be attributed to varying local demand and supply conditions.

Across all Expenditure Groups, Food and Non-Alcoholic Beverages (34.2%), Housing, Water, Electricity, Gas, Other Fuels (16.6%) and Transport (17.5%) are three most important consumer expenditures and thus have a bigger combined effect on price movements in the CPI baskets of all urban areas.

**Level of geography:** The scope of the Solomon Islands national CPI includes provincial urban centers of Honiara, Auki, Noro and Gizo.

Summary details of the process of updating the new basket and the reweight process based on the 2012-13 HIES can be sourced from the Technical Note 1/2018 Solomon Islands Consumer Price Index – Series 3 Reweight.

**Key Data Items:** Key indicators include: headline inflation and underlying inflation by main expenditure categories and by locality, and headline CPI by imported and domestic items These indicators are presented periodically (i.e, month on month and 3-months moving average) and released on monthly frequency. The annual (year on year) series is made available on request.

The underlying or core inflation measures include: I. All CPI excluding Volatile Items; II. All CPI excluding Volatile Items and Price Control Items; III. All CPI excluding Volatile, Price Control and Excise Items; and IV. All CPI excluding Volatile, Price Control, Excise Items and Other Selected Items. Technical notes can be sourced from previous publications (annex 1).

**Compilation methodology:** The SINSO applies the internationally recognized Laspeyers method based on the weighted Laspeyres' index for computing the CPI. In the current updated CPI, price relatives are calculated as geometric means and used to create the price index following international best practice. The rebase period is 2013=100 and the index reference period for the time series is 2017=100. This method is applied by locality where separate CPIs for Honiara, Auki, Gizo and Noro are produced and then aggregated as a weighted average for the national index. The exclusion based method is applied in deriving the underlying inflation rate measures.

**Standard classifications**: The SINSO used to adopt the UN Classification Of Individual Consumption according to Purpose (COICOP) to classify data within the Solomon Islands context but has now harmonized its classification with the pacific regional COICOP for regional comparability purposes.

International standards have been followed as closely as practical in developing the weights for the new series (2017=100) of the CPI. The ILO CPI Manual (2004) has been the primary reference, followed by ILO Resolution II: Resolution Concerning Consumer Price Indices (2003). In instances where the treatment of commodities has differed from international standards, the reasons have been to acknowledge practical difficulties in price collection, to take account of specific national conditions, or to ensure that the CPI is a robust measure of exposure to price change.

**Numerator/Denominator Source:** The numerators and denominators for percentages are from the same data source.

**Additional information:** The CPI and inflation are key economic indicators that are able to inform the country's key monetary and fiscal (budgetary) policies, and inform the general public about the general cost of living in Honiara or the country. Apart from the availability of other official price measures, other uses of the CPI include informing decision making and assessments about inflation adjusted wage indexation policies.

The CPI is also used as a deflator of other economic data. For example, the CPI and its components are used to adjust Gross Domestic Product by Expenditure (GDP-E) in current prices for price changes and to convert these series into inflation adjusted series or GDP at constant prices.

# Caution must be considered in terms on interpreting data when disaggregated into sub-national (locality) level due to the relative size of the sample (basket), relative size and nature of CPI outlets and markets, and household (consumer) behavior when making inferences on the type of indicator.

#### **Timeliness:**

**Data collected:** The SINSO collects the prices of fresh fruit, vegetables and meat weekly and collects the prices of all other items during any one day in the second half of the month.

**Data available:** The data is usually available 2 weeks after the reference month.

**Referenced Period:** The data is published for a particular calendar month. The data is published on a monthly, quarterly (3-months moving average) and annual frequencies.

**Additional information:** There are sometimes revisions to data after release where data for missing prices becomes available or if adjustments need to be made to accommodate changes following recognized statistical techniques.

#### **Accuracy:**

**Method of Collection:** The SINSO collects data mainly by direct approach (visits) in the collections of prices in retail outlets and markets, and by face-to-face approach from selected service providers.

**Data Adjustments:** Data are sometimes adjusted to accommodate changes in product specifications and branding following recognized statistical techniques

**Additional information:** The SINSO uses a quality assurance process to minimize data quality issues, item specifications issues and processing errors.

#### **Coherence:**

Consistency over time: The data is consistent over time since 1992. The series was linked (spliced) in 2005 to maintain consistency in series back to the 1992 base year. Due to the loss of past data records as a consequence of the ethnic tensions from 1998 to 2003, the SINSO has not officially published a linked series prior to 1992. However, users who possess older records of the data are able to link back the series to meet their own interests.

Progressive improvements in definitions and methods have been applied since the first iteration of the index. Prior to independence in 1978 and up to mid-1990s (with the conduct of the 1982 and 1990/91 sample Household Income and Expenditure Survey (HIESs, limited coverage), the Retail Price Index (RPI) was the first index used as a measure of the changes in the prices of goods and services in Honiara. The weighting scheme and the basket of goods and services captured in the 1982 HIES reflected predominantly residents and expatriate household expenditures in urban Honiara.

In 2005/6, another HIES covering Solomon Islands citizen/resident households was undertaken to update of the CPI weights based on the 1990/91 survey. The updated CPI with base period (2005=100) followed similar methods in reweighting and in updating the basket which included 187 items. In 2012/13, the SINSO undertook another HIES. The data from the 2012/13 HIES formed the basis for the current updated CPI (Series 3 - Honiara) with a new reference period (2017=100). This is now being released through this publication (First Release: Honiara Consumer Price Index: Series 3). The process of updating the new basket and the reweighting process is now expanded to include other provincial towns of Auki, Noro and Gizo. Further basic information can be obtained from the Technical Note 1/2018 Solomon Islands Consumer Price Index – Series 3 Reweight.

The SINSO plans through the National Statistics Development Strategy (NSDS) 2015-16 to 2035 that the CPI weights and basket of goods and services be regularly updated approximately every 10 years (more preferably 5-years) from data from the conduct of HIES.

<b>Additional information:</b> There are no actual price data for some months of the year 2000 during
the period of 'The Tensions'. During the civil unrest period in 1998 to 2003, the SINSO also lost a
number of data files and records during this period.

Actual prices collected for the provincial localities (Gizo, Noro, Auki) started from July 2017. Data prior to July 2017 used Honiara prices as proxies.

# Interpretability:

The movement in index from one period relative to another can be expressed as a percentage change. In the Solomon Islands context, this percentage change is referred very broadly as headline inflation. The following example illustrates and interprets the percentage change:

If we look at the Honiara CPI (All Items) for July 2018 = 103.0 and the same period last year, July 2017 (All Items) CPI=100.5 periods, the index point is the difference between the two index levels, but it is more meaningful to express this movement as a percentage change. Thus, we can calculate the percentage change by subtracting the index value of the previous period (July 2017) from the current period (July 2018) and dividing the resulting value by the index value of the previous period (July 2017) and then multiplying by 100.

Thus,  $[(103.0-100.5)/100.5] \times 100 = (2.50/100.5) \times 100 = 0.0248756 \times 100 = 2.5\%$  (rounded to one decimal point). This implies that prices have increased by 2.5% since July 2017 or from the period July 2017 to July 2018.

Similar interpretations can be applied to various periods of comparisons of interest. The SINSO officially reports the headline CPI and headline inflation based on the 3-months moving average period, on the same period in the preceding year. However, data by month and annual are provided for users to support their choice of a particular period for CPI and inflation.

#### **Accessibility:**

Users can request unpublished data for issues of statistical bulletins that have already been released by contacting the Prices Unit. There are no costs associated with the provision of this data.

#### **Contact details:**

Email: STATS-Economics@mof.gov.sb Telephone: (+677) 27835 or (+677) 25451

**Additional information:** The data will be made available in a spreadsheet format from the SINSO website (www.statistics.gov.sb) and in a hard copy.
