APPENDIX I: Methodology, Data Sources and Challenges.....	12
GDP by Production.....	12
GDP by Expenditure.....	12
Data Sources.....	12
Short-Medium Term Challenges.....	13

INTRODUCTION

This statistical bulletin (17/2016) presents the newly compiled provisional Gross Domestic Product (GDP) estimates and related components for 2015. This edition includes some revisions to the time series data as a result of improvements in the quality of the source data, and general revisions in conceptual treatment of certain aggregates and in compilation. No major methodological changes (see Appendix I) were applied since the previous GDP estimates (Statistical Bulletin: 1/2016). The annual GDP estimates are compiled at current and constant 2004 prices using the production and the expenditure approaches. The compilation of the GDP estimates follows the framework of the 1993 United Nations System of National Accounts (SNA) whilst drawing on conceptual considerations of certain economic activity from the 2008 SNA.

The provisional estimate of Gross Domestic Product (GDP) at constant 2004 prices shows a growth rate of 2.6 percent (additional \$111million) from the previous year. The real GDP value of \$4,451 million is estimated at 2004 prices and reflects the net value of goods and services produced in the country. Related information on GDP aggregates are provided such as per capita GDP, per capita household final consumption expenditure (HFCE) and related components such as GDP by economic activity and expenditure shares, including information on industry growth rates and revisions in levels to previous estimates.

Following from previous publications, the major challenge in the compilation of the annual GDP estimates is having a consistent and sustainable inflow of quality and reliable source data. For example, the current detail and disaggregation of the development budget and donor expenditure data continues to be inadequate to accurately estimate their contribution to GDP. Moreover, with the release of the 2012-13 Household Income and Expenditure Survey (HIES) results in late 2015, the Solomon Islands National Statistics Office (SINSO) has begun the process of revising the GDP series. This work involves updating the household final consumption expenditure (HFCE) and the informal sector estimates including current work towards rebasing the current weights of the consumer price index (CPI), and the work towards the rebase of the GDP estimates in constant prices.

Users of the GDP information should note that whilst other government ministries and agencies such as the Ministry of Finance and Treasury (MOFT), and the Central Bank of Solomon Islands (CBSI) also compile key GDP aggregates on a more frequent basis for their own internal use, such as for forecasting purposes, SINSO remains the central government agency responsible for official statistics and is mandated to compile and disseminate GDP estimates without due influence from any other agency or person. However, the SINSO coordinates with other agencies with respect to data requirements.

The SINSO acknowledges the support of the IMF's Pacific Financial Technical Assistance Centre (PFTAC) and the internal technical support of the Australian Government's DFAT-Aid Program-Education/Statistics.

Symbols, where applicable:

- nil or less than half the last digit shown
- n/a not available
- r revised since previously published
- p preliminary/provisional estimates

APPENDIX I. METHODOLOGY, DATA SOURCES AND CHALLENGES

This annex presents a summary of the main methodological issues, data sources and limitations as well as short-medium term challenges during the compilation of the 2015 annual estimates. Additional details of the compilation history of the GDP estimates can be obtained from past publications.

The compilation of the GDP estimates follow practices recommended in the 1993 System of National Accounts (SNA). GDP is derived by the production and expenditure approaches. The 2008 SNA recommendations cannot be fully implemented due mainly to data limitations. However, certain conceptual treatments for specific types of economic activities such as units undertaking ancillary activities within enterprises, and mining and mineral exploration have been considered within the meaning of the 2008 SNA.

I. GDP BY PRODUCTION

The GDP or the Gross Value Added (GVA) by economic activity is calculated as the difference between the Gross Value of Output (GVO) and Intermediate Consumption (IC) at both current and constant prices. As noted in previous bulletins, there are some specific cases where the GVA is computed by the sum of costs approach such as in the mining and quarry industry. The GVOs at constant 2004 prices are mainly derived by extrapolating the 2004 GVO by appropriate volume indicators. The ICs at constant 2004 prices are computed by using volume indicators of IC and by applying the ratio of the IC/GVO in 2004 to GVO at constant price in the current year.

The main improvements realised relate to on-going revisions to the components of GDP as a result of new and more accurate information becoming available including the re-distributional effects across production and expenditure approaches as a consequence of improvements to certain conceptual treatments of related aggregates within the compilation process.

II. GDP BY EXPENDITURE

GDP estimated from the expenditure approach is derived as the sum of all final expenditures (household final consumption expenditure, final consumption expenditure of NPISHs, government final consumption expenditure), gross fixed capital formation, change in inventories and net-exports of goods and services. There was no major methodological change applied during derivation as in the previous publication. Compilation efforts followed similar approaches applied in previous annual GDP derivations. Improvements applied included revisions to certain aggregates as a result of more accurate information becoming available as well as effects of improvements in the overall compilation process.

III. DATA SOURCES

The main data sources used in the compilation of the GDP at current and constant 2004 prices include:

- Business Surveys (SISO),
- Non-Profit Institutions Survey (SISO)
- Trade Statistics (SISO/Customs)
- Balance of Payments (CBSI)

- National Provident Fund Employment Data (SINPF)
- Inland Revenue Aggregate records
- Government Finance (Finance and Treasury (MOFT)/National Planning Ministry (MDPAC))
- Annual and Quarterly Economic Review (CBSI)
- Household Income and Expenditure Survey 2005/6 (SINSO)
- Census Population Growth Rates (SINSO)
- Consumer Price Index (SINSO)
- Selected Volume and Price indexes (various sources/SINSO)
- Imports and Export Price indexes of major commodities (various sources/SINSO)

IV Short-Medium Term Challenges

On-going revisions to the GDP and related data series will continue to be made depending on forthcoming new data and improved data sources such as the data from the 2012-13 Household Income and Expenditure Survey (HIES).

A number of immediate challenges for the SINSO in the compilation of the GDP and related national accounts aggregates include the following:

- The quality of the current GDP estimates depends on the quality/reliability of source data from other organizations and information sources. The SINSO has taken steps to address this by way of formalising data sharing arrangements within the scope of the National Statistical Development Strategy (NSDS) 2015-16 to 2035.
- A major revision to the GDP series is currently being progressed by the SINSO. This involves the updating of the household final consumption expenditure (HFCE) and informal sector estimates, including current efforts to rebase of the current weights of the consumer price index (CPI) and the rebase of the GDP estimates in constant prices.
- The current limited range of price and volume deflators also impacts on the quality of the GDP estimates. The SINSO continues to work towards improving the current measures while exploring alternative measures including implementing similar efforts identified in the NSDS.
- Accessing more detailed and up-to-date version of the development budget data remains a challenge. Plans towards addressing this and similar challenges have also been considered as part of NSDS.
- Improving the quality and response rate of the Annual Business and Employment Surveys continues to be progressed including considerations for legal prosecution of non-compliant enterprises. This also requires a review of the Statistics Act which is also earmarked as one of the key activities of the NSDS.
- Strengthening the coordination and collaboration with other key stakeholders on national accounts is being progressed through resource sharing, networking, possible secondment arrangements identified within the scope of the NSDS.
